

550 Photovoltaic panel open circuit voltage

Overview

First, the basics: Most 550W panels operate with an open-circuit voltage (Voc) between 49-52V per module under standard test conditions (25°C cell temperature). But here's where it gets interesting—the actual maximum system voltage isn't determined solely by the panel itself. This sounds a bit weird, but it's really not. This value isn't just a random number on a datasheet—it directly impacts how you design your solar array, select compatible inverters, and. Use our calculator to easily find the maximum open circuit voltage of your solar array. You can usually find this number on a label on the back of the solar panel. How many of this panel are you wiring in series?

(If you're wiring different solar panels together, use the "Add a Panel" button below. The one controller should handle all four panels right?

It does get down towards -20F a few weeks each year. TFL-210X30_10_36
