

8 solar panels connected in series

Overview

To wire your solar panels in series, simply link the positive MC4 connector of the first solar panel to the negative MC4 connector of the next one, and continue this pattern for the remaining panels. This configuration is essential for grid-tied systems, long cable runs, and applications. In this article, we'll talk about how to connect solar panels together, look at three wiring methods and explain which one is the best for you. The resulting current will be the sum of all of the panel amperages in the parallel array. At this stage, it's crucial to align the series configuration with the specifications of your solar charge controller or hybrid inverter. This ensures safety, efficiency, and maximum energy output from your system.
