

# Accounting treatment for rooftop photovoltaic panels

## Overview

---

Solar panels have a fairly long useful life, so they can be depreciated for anywhere from 20 to 30 years, but inverters and battery storage systems wear out sooner – anywhere from five to 15 years – so you have to record these assets separately and depreciate them over different. Solar panels have a fairly long useful life, so they can be depreciated for anywhere from 20 to 30 years, but inverters and battery storage systems wear out sooner – anywhere from five to 15 years – so you have to record these assets separately and depreciate them over different. Let's start with the obvious accounting item, which is capitalizing the cost of the panels. This includes the cost of not just the panels, but also any associated racking systems, and batteries, and inverters. In case you're wondering, a solar panel produces direct current, and an inverter is. With the Inflation Reduction Act of 2022 (“IRA”) and increased focus on climate sustainability, there has been immense interest from international and U. investors to enter the clean-energy sector in the U. As solar and other renewable energy industries experience significant growth, it's a. Capitalizing costs in renewable energy projects is a crucial accounting method that impacts financial statements and influences investment decisions. This method of accounting treatment aligns expenses with the income generated by the asset over time, establishing a fair representation of the. Investment in a solar power plant is in most cases characterized by fixed assets that carry most of the cost. In such cases, an obligation to remove the installed equipment and retribute the land to the owners may arise at the end of the lease term.
