

American Standards for Microgrids

Overview

This report provides an overview of the microgrid industry in North America, synthesizing information from current literature, available standards, and industry experts. Authorized by Section 40101(d) of the Bipartisan Infrastructure Law (BIL), the Grid Resilience State and Tribal Formula Grants program is designed to strengthen and modernize America's power grid against wildfires, extreme weather, and other natural disasters that are exacerbated by the climate. — The National Electrical Manufacturers Association (NEMA) launched a new guideline that establishes clear performance standards for microgrid control systems to ensure they work efficiently and reliably and promote the overall integration of renewable energy sources into power grids. It covers and compares technology standards from various regions and. Microgrids have emerged as a critical component in the evolving energy landscape. It summarizes the current state of the microgrid industry and its standardization landscape, outlines emerging trends that will.
