

Barbados energy storage market

Overview

Barbados has taken a significant step toward transforming its energy landscape with the launch of the Caribbean's first competitive Battery Energy Storage System (BESS) auction — a development that could redefine how renewable energy is integrated, financed, and scaled across. Barbados has taken a significant step toward transforming its energy landscape with the launch of the Caribbean's first competitive Battery Energy Storage System (BESS) auction — a development that could redefine how renewable energy is integrated, financed, and scaled across island grids. Barbados has launched the second phase of its Battery Energy Storage System (BESS) procurement process, a critical step in tackling ongoing grid congestion that has stalled the growth of the renewable energy sector. The tender process will open the door for developers to bid for up to 60 megawatts. The competitive process will award 60 MW / 240 MWh of battery energy storage systems. It marks the first time Barbados has used price-based competition in its power sector, creating a potential blueprint for other Caribbean markets.
