

Can I choose the color of the photovoltaic panels

Overview

Yes, solar panels can come in different colors, although black and blue are the most common due to their high efficiency. When choosing solar panels, most people focus on efficiency and cost, but one often overlooked factor is color. Darker colors absorb more light and convert it to electricity, while lighter colors reflect more light and waste some of the energy. Black, blue, gray, even semi-transparent. each color tells a story. Monocrystalline types, being darker panels, have higher. Outside of very niche applications where solar cells and panels can actually be tinted specific colors (usually with a significant hit to efficiency), solar panels typically come in three basic designs: white, black, and transparent (aka bifacial).
