

# Can monocrystalline and polycrystalline solar panels be used together

## Overview

---

Can you mix polycrystalline and monocrystalline solar cells?

Technically, yes. A question that beginners often ask is, can you combine the two?

Can you install them in one solar array?

The answer yes it is possible, but you should not do it. This leads us to whether you should mix these two types of panels. They're both made from silicon; many solar panel manufacturers produce monocrystalline and. In this article, we will do a full in-depth comparison between Monocrystalline and Polycrystalline solar panels including: How are they made?

What do they look like?

How efficient are they?

How well do they react to heat?

What is their expected lifespan?

Are they recyclable?

How expensive are they?

. Monocrystalline solar panels (often called mono panels) are made from a single continuous crystal structure. This type of panel is produced using the Czochralski method, where pure silicon is formed into a cylindrical ingot and then sliced into thin wafers.
