

Can photovoltaic panels of different powers be used interchangeably

Overview

Solar panels of different watts should not be used together because they have different voltages and amps. The system will always choose the lowest voltage or amp, which will reduce efficiency and power output. Though mixing different solar panels is not recommended, it's not forbidden and things would be ok as long as each panel's electrical parameters (voltage. Yes, you can mix solar panels with different wattages - but there's a catch. How well they work together depends on how you connect them.
