

# Can the base station be powered off when it is installed on the roof

## Overview

---

Regardless of where this room is located, it must have its own 120- to 240-volt power supply, which may be split off the building's main electrical panel or be independent of the building's power supply. The Base system is always installed outside of a members home near the meter of the house. Safety and adherence to local building codes are the primary drivers for these requirements, ensuring that installations protect both residents and their property. Base offers two system configurations. You'll also find answers to common battery myths and top tips to help you prepare for outages. Base batteries run in two directions, which is how Base is able to keep. My guess is that if I could get it higher off of the roof, there will be a point where the metal roof wouldn't have as much of an effect on it. But, I really don't want to go higher with it because the mast I have wouldn't support much more length without some re-engineering and although I don't. While mobile CB radios serve truckers and off-roaders well, nothing matches the communication power and reliability of a properly installed base station CB system. An independent power supply.
