

Communication Wireless Base Station Communication Equipment

Overview

Simply put, a base station (BS) is a wireless transceiver device in a mobile communication network that provides wireless coverage and communicates with mobile terminals like your phone. The term is used in the context of mobile. The article has been reviewed by Dr. Botao Feng, an IEEE Senior Member/Senior Engineer/Senior Research Fellow; a Postgraduate Advisor/Postdoctoral Advisor from Shenzhen University, Antennas and Propagation, Wireless Communication. Therefore, this is very important for enabling the signals to cover long distances and even penetrate barriers in the communication environment. Base stations are the foundational elements that make this connectivity possible, acting as fixed points that bridge the gap between a mobile device's radio signal and the global wired network.
