

# Communication base station battery energy storage system signal tower frequency range

## Overview

---

This paper proposes a control strategy for flexibly participating in power system frequency regulation using the energy storage of 5G base station. Firstly, the potential ability of energy storage in base station is analyzed from the structure and. The energy storage of base station has the potential to promote frequency stability as the construction of the 5G base station accelerates. Users can use the energy storage system to discharge during load peak periods and charge from the grid during low load periods, reducing peak load demand and saving electricity. Energy storage systems (ESS) have emerged as a cornerstone solution, not only guaranteeing critical backup power but also enabling significant operational efficiency and sustainability gains. 45V output meets RRU equipment.
