Overview

The paper aims to provide an outline of energy-efficient solutions for base stations of wireless cellular networks. Mobile communication base stations are the main energy-consuming units in telecommunications operations. In actual operation, managers generally face the following major challenges: High frequency of electricity bill disputes: Many base stations are located in rented buildings or sites, and the. How much energy does a communication base station use a day?

A small-scale communication base station communication antenna with an average power of 2 kW can consume up to 48 kWh per day. The industry's bleeding edge reveals three systemic challenges: Consider Mumbai's 5G rollout - despite 94% population coverage, base station operational costs consumed. Technological advancements: The New technologies result in evolved base stations that support upgrades and enhancements such as 4G, 5G and beyond, its providing faster speeds with better bandwidth. Practice shows that the existing energy supply sources - the power grid, diesel generators and batteries - do not allow for effective operation in. Base stations must operate 24/7/365.
