

Connect the load from the solar inverter output line

Overview

A backfeed breaker can be used to connect a solar PV system to the load-side of a service. There are several different ways this can be done per the NEC but the most common method for solar residential installs is by connecting it to the end of a busbar using the 120% rule. Need to connect your photovoltaic inverter's output line safely and efficiently?

This guide breaks down the process into actionable steps, ensuring compliance with industry standards while optimizing energy transfer. Whether you're a solar installer, technician, or DIY enthusiast, this article will. There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below. The most common is a "LOAD SIDE" connection, made AFTER the main breaker.
