Overview

A genset, or generator set, is a compact, self-contained power unit used to operate refrigerated containers—commonly called reefers—when no external electricity is available. These diesel-driven machines supply the energy needed to keep the container's cooling system running. A commercial generator for your 20ft or 40ft refrigerated shipping container will give you the protection and peace of mind you need. No matter your region's emission standards, we have the PowerLINE Generator Set to meet your compliance needs. Here's a look at how custom reefer genset solutions are powering the cold chain logistics industry. High-efficiency gensets maximize fuel usage while minimizing emissions.
