Overview

To directly answer your question, the cost of purchasing the materials for a 10kW solar power system can range from US\$9,900 to US\$14,800, excluding installation and permitting costs. This price range reflects the cost of a good-quality system of this size. But your actual price will depend on factors like your roof's complexity, local labor costs, the equipment you choose, and what incentives are available in your area. The main cost drivers are panels, inverters, racking, wiring, permitting, and installation time. The ESS system is assembled in the United States using domestic components except for the battery cells, which are imported. This analysis provides the necessary context for determining the true cost of a 10kW solar system and what that investment yields in terms of power production. In 2025, the average cost. If you want to know more about them, you may want to read our article about the differences between on-grid and off-grid solar power systems.
