Demand response

Overview Background Electricity pricing Electricity grids and peak demand response Load shedding Smart grid application Application for intermittent renewable distributed energy resources Technologies for demand reduction

Demand response is a change in the power consumption of an electric utility customer to better match the demand for power with the supply. Until the 21st century decrease in the cost of pumped storage and batteries, electric energy could not be easily stored, so utilities have traditionally matched demand and supply by throttling the production rate of their power plants, taking generating units on or off line, or importing power from other utilities. There ar...

Demand response programmes improve electricity consumption

Demand response programmes help utilities manage the demand on power grids by encouraging customers to shift electricity demand to times when electricity is more plentiful or other ...
