

# Difference between 300W and 450W solar panels

## Overview

---

A 450W panel, for example, produces considerably more power than a 300W panel, often with a similar physical footprint. This higher wattage leads to increased energy generation per panel. N-Type TOPCon Technology Dominance: In 2025, N-Type TOPCon cells have become the gold standard for 450W panels, offering superior efficiency (up to 24%), better temperature coefficients (-0.25% annually compared to. However, on commercial and residential rooftops, solar panel dimensions are often more critical than wattage, as they directly determine whether the system can reach the expected capacity and long-term performance. The size gap between different wattage classes can reach several tens of. There is no standardized chart that will tell you, for example, "A typical 300-watt solar panel is this long and this wide. The size of 350W solar panel is 1980\*880\*35mm, the weight is 21.
