

Direct charging of tool solar container lithium battery pack

Overview

It is possible to charge the battery by connecting the output of the solar panel directly to the terminals of the battery. (lithium-ion, lead-acid) based on your power requirements and the charging system's compatibility. The process involves using a vehicle charger and a female. Keeping a spare battery pack on charge also allows a quick battery change and continued tool operation without having to wait.

Direct charging of tool solar container lithium battery pack

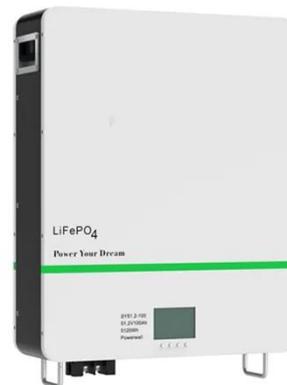

Solar Power Tool Charger

In the most basic models, the charger will connect directly to the end terminals of the battery pack at 2 exposed pins. The charger then applies a small direct current and slowly charges ...
