

Disconnect the communication network base station

Overview

In the system web interface, go to DECT Wireless > Base Station Group. To remove a base station from the multi-cell system, select the check box for the base station under the Remove column, and select Remove. Of course, that warning message also means that your Base Station has switched over to the built-in cellular backup. If you lose the connection to the GNSS internet source when using an internet data link, tap the GNSS internet source icon in the status bar. The Rover data link screen appears. Reboot all base. In modern communication networks, base stations, as core infrastructure, are crucial for stable operation. The base station power cabinet is a key equipment ensuring continuous power supply to base station devices, with LLVD (Load Low Voltage Disconnect) and BLVD (Battery Low Voltage Disconnect). In today's connected world, telecom base stations form the invisible foundation that enables mobile communication anytime, anywhere.
