Overview

The objective of this study is to assess: (a) a least-cost, operationally feasible pathway for India's electricity grid through 2032, (b) critical aspects of energy storage, including total energy storage requirement through 2032, optimal locations (co-located). The objective of this study is to assess: (a) a least-cost, operationally feasible pathway for India's electricity grid through 2032, (b) critical aspects of energy storage, including total energy storage requirement through 2032, optimal locations (co-located). The report, Strategic Pathways for Energy Storage in India Through 2032, tackles these questions. With its sharp analysis and data-driven approach, it maps out practical, affordable ways to roll out storage, highlights priority areas, and explores how different technologies can work for us. With a rise in preference for firm renewable energy, the share of hybrid tendered capacity has increased from about 12% in 2021 to over 49% in 2024 in the. While energy storage systems are not a new concept, with reduction in prices of Lithium Iron Phosphate (LFP), LFP based battery energy storage systems (BESS) have taken a centre stage, enabling renewable energy to be integrated more effectively into the power system. Battery energy storage systems. The convergence of renewable energy deployment, electric vehicle adoption, and grid modernisation requirements creates unprecedented demand for advanced battery technologies across emerging economies. Batteries are now a critical solution to drive value for both capital and consumers. This is the first report in a two-part series exploring the growing. India's clean energy transition is accelerating, with ambitious goals of achieving 50% non-fossil installed capacity by 2030. This vision cannot succeed without large-scale energy storage.
