## Overview

---

Here, we study the problem of how to best arrange solar panels in three dimensions to make macroscopically three-dimensional PV (3DPV) devices capable of optimizing the energy generated in a given base area (energy density). Each panel is made up of many small cells that capture sunlight and, through a process called the photovoltaic effect, generate electrical current. Typically, these cells are made from. Solar 3D Design is an online business service established in Year 2020. Also known as a solar array layout or solar PV layout, a solar panel layout drawing is a key component of a solar plan set.
