

EU Solar Power System

Overview

Solar became the EU's largest source of electricity for the first time in June 2025. National records for solar and wind rolled in across EU countries in May and June, pushing coal to an all-time low. From 17-18 February 2026, the SUPERNOVA project will organise three sessions at the Solar Quality Summit Europe 2026 conference in Barcelona. Get to know the SolarPower Europe team working to transform. Reducing the EU's dependence on fossil fuels, solar energy plays a key role in both the clean energy transition and the REPowerEU plan. This development marks a structural change in how electrical energy is produced and managed across Europe. 6 billion European solar heating sectors consisted of small and medium-sized businesses, generated 17.3 terawatt-hours (TWh) of energy.

EU Solar Power System

Wind and solar overtook fossil fuels for EU power generation in 2025

Wind and solar overtook fossil fuels in the European Union's power generation last year, a report has found, in a "major tipping point" for clean energy. Turbines spinning in the wind and ...

Solar is EU's biggest power source for the first time ever

Solar became the EU's largest source of electricity for the first time in June 2025. National records for solar and wind rolled in across EU countries in May and June, pushing coal to an all-time ...

EU Solar Output Tops 340 TWh in 2025, Lifting Renewables to Nearly ...

EU Solar Output Tops 340 TWh in 2025, Lifting Renewables to Nearly Half of Power Mix Renewables accounted for close to half of electricity generation in the European Union (EU) in 2025, ...

How Europe is paying for its solar boom

The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what support is still available, and what still needs to happen?

Solar energy

Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's ...

Solar power in the European Union

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

How Wind and Solar Are Reshaping the EU Power System

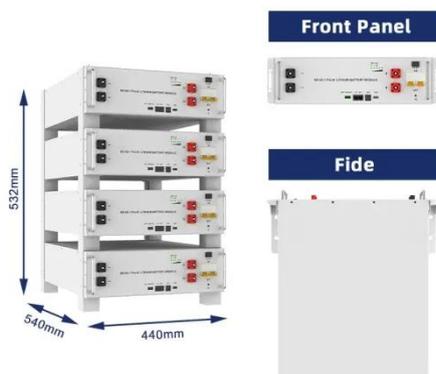

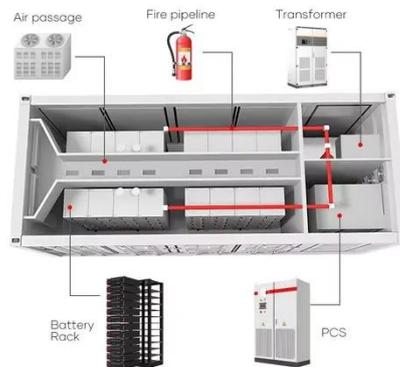

Technical overview of how wind and solar overtaking fossil fuels affects the

EU power system, grid design, and industrial applications.

EU Solar Energy Strategy

The Solar Energy Strategy is part of the EU's RepowerEU plan to phase out Russian fossil fuels and accelerate the green transition in response to Russia's invasion of Ukraine.

Wind and solar overtake fossil fuels in EU energy mix for first time

Wind and solar generated more EU electricity than fossil fuels for the first time in 2023, marking a "major milestone" in the transition to clean power.
