

Electric heating installed on photovoltaic panels in the north

Overview

The short answer is yes, solar panels can heat a house. It involves two distinct technologies with different price tags and efficiencies. Solar Photovoltaic (PV) panels are generally installed on a roof and use the energy from the sun to power any electrical appliance in your home, including electric radiators. This electricity is free to produce and is great for the environment as no carbon is given off during the production. Federal Tax Credits May End Soon: While the 30% federal tax credit is currently available through 2032, Congressional proposals may terminate residential credits by the end of 2025, making immediate installation potentially more valuable for homeowners. For smaller, targeted heating needs like a workshop, greenhouse, or even a chicken coop a simple Solar Palmetto makes it easy to see your solar potential, lock in your setup, and start making your own energy. Turn on all the lamps—because you've got the power. There's a bunch of ways to pay for your clean energy setup.
