

Electric vehicle policy santo domingo

Overview

The report answers to this situation in two ways: it offers an introduction into the relevant parameters, like types of electric vehicles and charging stations, as well as grid integration aspects and an overview of the key stakeholders and roles in the charging business. In the webinar held by the chapter for the Dominican Republic of the World Energy Council (WEC-RD), Asomoedo executives highlighted that the country has 2,000 units of electric vehicles, between hybrids and electric. -The energy, environment, technology and mobility are the factors. A new study has analysed regulatory and technical requirements for electromobility in the Dominican Republic. If these goals are realised, this would represent a 44% reduction in CO2 emissions projected for the internal combustion engine vehicle fleet, the plan. The public consultation opened by the Superintendency of Electricity seeks to adjust the technical rules for charging stations in the Dominican Republic, while importers and operators demand interoperability, definitions on connectors and criteria for high power hubs that avoid charging "islands". With its capacity of 225 kilowatts (kW), it can simultaneously charge 29 electric cars with 100 percent renewable energy. There are even nations that have set deadlines to close the issue.
