

Electricity distribution norway

Overview

The Norwegian electricity grid consists of three levels: the transmission grid (operated by Statnett), the regional distribution grid and the local distribution grid. Both the regional and the local distribution grids are considered as distribution systems, as defined by EU. The electricity sector in Norway relies predominantly on hydroelectricity. Source: Statistisk sentralbyrå. Når du registrerer deg som nyhetsabonnet, får du en e-postbekreftelse. Known for its many fjords and lakes, Norway's extensive natural resources are also an integral part of its electricity market. In business and industry, the public service sector and households, reliable access to electricity is a matter of course.
