

Fireproof double glass components

Overview

It consists of multiple layers of glass separated by fire-resistant interlayers, such as intumescent material or gel. These interlayers expand when exposed to high temperatures, forming an insulating barrier that helps prevent the transfer of heat. Fire-rated glass in fire-resistant framing systems enhance code-required fire and life safety while supporting occupant wellbeing and a more cohesive space. Fire-rated doors and windows located along areas of egress serve as critical fire protection, helping confine flames, smoke and, in some. The double layer fire resistant provides both integrity and insulation against heat transfer. Ray-Bar has successfully engineered, designed, tested, manufactured, fabricated, and supplied code compliant Life and Safety. tecton from accidental fire. II, clear specialty tempered glazing. Decorative options also available. Now available with Starphire Ultra-Clear ® glass by.

Fireproof double glass components
