

# Fishing-light complementary flexible bracket photovoltaic

## Overview

---

In the fishery-photovoltaic complementary project, the flexible solar mounting system can meet the sunlight demand for power generation and fishery by controlling the row spacing flexibly. The utility model relates to the technical field of fishing light complementary industry, in particular to a fishing light complementary photovoltaic mounting bracket. The ear rack is fixed on the main body, and a first fixing support rod and a second fixing support rod are fixed on the ear rack;. As ecological agriculture and clean energy converge, the application of flexible mounting systems in Fishery-photovoltaic Complementary Industry is becoming increasingly widespread. This innovative technology not only enhances the efficiency of fishery farming and photovoltaic power generation but. "Fishing and photovoltaic complementation" refers to a fishery model that combines aquaculture with photovoltaic power generation, erecting photovoltaic panels above the breeding waters to generate electricity, and carrying out aquaculture activities in This kind of power station utilizes the water. ntly different from those in lake. The studies of the impact of FPV on the balance of both radiation and ene med a new underlying surface type.
