

# Flexible photovoltaic panel power generation parameter settings

## Overview

---

Parameters of photovoltaic panels (PVPs) is necessary for modeling and analysis of solar power systems. The best and the median values of the main 16 parameters among. Our Flexible Solar Panels redefine solar adaptability and convenience. The power generation from the field for flexible curve solar panel has been calculated at a different curve angles. 5% efficiency for monocrystalline and 19% for CIGS technology, making them increasingly competitive with rigid panels while maintaining superior installation versatility. The standard test conditions ("STC") foresee a temperature equal to 25 °C and an irradiation level 1000 W/m<sup>2</sup>.
