

# Green electricity slovenia

 **TAX FREE**    

**Product Model**  
HJ-ESS-215A(100KW/215KWh)  
HJ-ESS-115A(50KW 115KWh)

**Dimensions**  
1600\*1280\*2200mm  
1600\*1200\*2000mm

**Rated Battery Capacity**  
215KWH/115KWH

**Battery Cooling Method**  
Air Cooled/Liquid Cooled

  
**ENERGY STORAGE SYSTEM**

## Overview

---

As of 2025, Slovenia relies heavily on low-carbon sources for its electricity, with close to 80% of its electricity being clean. Nearly half of this clean electricity comes from nuclear power, accounting for over 40% of the total. The focus is on battery storage and distribution grid. Slovenia has a target of reducing greenhouse gasses by 18% in 2030 when compared to 2015. 9 million euros in EU funding to support renewable energy projects, including photovoltaic systems and local energy communities, to boost electricity production and smart energy systems from 2025-2027. The objectives of the component "Renewable energy and energy efficiency" are to increase the use of renewable energy sources, improve energy efficiency and reduce. Slovenia is stepping up efforts to meet Europe's energy goals by partnering with Azerbaijan, a country rich in renewable energy potential.

### Energy in Slovenia

Electricity generation is mainly provided by nuclear power (36.2% in 2019), hydroelectricity (29.1% in 2019), and coal (27.9% in 2019); the three sources accounting for 93.2% of total electricity generation.

## Slovenia Electricity Generation Mix 2025

As of 2025, Slovenia relies heavily on low-carbon sources for its electricity, with close to 80% of its electricity being clean. Nearly half of this clean electricity comes from nuclear power, accounting for ...

## Europe's Future Wired Through the Black Sea -- Slovenia Powers Up

Slovenia is stepping up efforts to meet Europe's energy goals by partnering with Azerbaijan, a country rich in renewable energy potential. A big part of this partnership is the Black ...

## The Illusion of a Green Transition in Slovenia by 2050

Alternative carbon-free sources include renewable energy sources (RES) i.e. electricity, synthetic fuels and hydrogen from water electrolysis. The model is based on the use of currently mature low-carbon ...

## Renewable Energy and Energy Efficiency

The investments are aimed at increasing the share of electricity from renewable energy sources, reducing losses in the electricity grid and promoting energy efficiency measures in industry.

## Slovenia secures EU funding for renewable energy projects and local

Slovenia has secured 11.9 million euros in EU funding to boost community self-supply of electricity from renewable sources between 2025-2027. The funds will support photovoltaic systems ...

OverviewClimate changeGeneralFuel  
sourcesElectricity

Electricity generation is mainly provided by nuclear power (36.2% in 2019), hydroelectricity (29.1% in 2019), and coal (27.9% in 2019); the three sources accounting for 93.2% of total electricity generation. Minor sources of electricity generation, each contributing less than 4% of total electricity generation, are natural gas, solar photovoltaic (solar PV), and biofuels. Following steep declines in use since 1990, Slovenia eliminated the use of oil for generating electricity in 2019. Renewable energy sources other than hydropo...

## **Slovenia endorses key green energy, grid investments**

Slovenia selected a range of PV, battery storage and grid projects eligible for support via the European Union's Modernisation Fund.
