

Has France changed its solar sites

Overview

In a controversial vote, the National Assembly approved a moratorium on new solar and wind projects from 2025 to 2035, only to reverse course the next day, after France Renouvelables (the country's renewable energy association) called it a threat to nearly 80,000 jobs. Explore why France's solar expansion faces land-use limitations, local resistance, and complex permitting, despite having space to grow. France is ramping up its solar ambitions. But despite having the physical space, developers face a maze of regulatory, ecological, and local challenges that slow. France's Energy Regulatory Commission (CRE) recently announced major adjustments to its solar Feed-in Tariff (FIT) scheme, marking a pivotal transition in the country's solar policy from fixed subsidies towards market-based pricing. The new policy implements differentiated adjustments to. France made significant progress in renewable energy by 2025, with renewables comprising 30.6% of its energy mix, a 3% increase from 2024. At OpusFlow. While solar energy is central to meeting the challenges of the energy transition and electrification, its latest draft energy plan hints at a step backwards, despite the rising momentum in other European countries.

Has France changed its solar sites

Sunset or sunrise: the future of residential solar in France

In 2024, rooftop solar installations grew by 15% year on year, bucking a wider European slowdown. Yet just as growth is gathering pace, feed-in-tariffs have been cut.

France Reduces 2035 Solar Goal in Energy Plan

France has revised its Multi-Year Energy Program (PPE), reducing its 2035 solar energy target to 90 gigawatts. This marks a significant cut in the country's renewable energy ambitions, as ...

France Sets Bold Renewable Target for 2025

According to PVKnowhow, France added an impressive 1.4 GW of new solar capacity in Q1 2025. This growth was driven by the installation of 62,000 new solar projects, bringing the total to ...

France's Solar Energy Potential

Leading the Renewable Shift

France's solar capacity reached 20 GW by 2024, boosted by projects like the 300 MW Cestas Solar Park and a surge in rooftop installations. Aiming for 35 GW by 2028 under the Multi-Annual Energy ...

...

Why France Is a Top Solar Investment Market for 2025

France's energy landscape is undergoing a significant shift from nuclear power to renewable energy sources, creating a substantial market opportunity for solar installers. However, ...

France's Solar Policy Undergoes "Radical" Shift: Subsidies Scrapped ...

France's Energy Regulatory Commission (CRE) recently announced major adjustments to its solar Feed-in Tariff (FIT) scheme, marking a pivotal transition in the country's solar policy from ...

France's land challenge in the solar energy boom

France is ramping up its solar ambitions. But despite having the physical space, developers face a maze of regulatory, ecological, and local challenges that slow progress and ...

France 'flexes' nuclear output as solar reshapes European energy

Now, they are adapting to the boom in solar: power market data shows France's nuclear stations are increasingly flexing their output around the technology -- turning down during the day ...

Solar market overview France 2025

France added 4.6 GW of new solar capacity in 2024, pushing its total to 22.1 GW. With ambitious targets set for 2030 and beyond, the country is ramping up ground-mounted and rooftop ...

France Solar Week: France's solar sector marks major milestones in ...

France's solar sector has reached several significant milestones this year, underscoring the country's growing role in Europe's renewable energy transition.
