

How do energy storage and photovoltaics work together

Overview

Energy storage at a photovoltaic plant works by converting and storing excess electricity generated by the photovoltaic plant, and then releasing it when demand increases or production is reduced. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Economic benefits arise from integrating these technologies with renewable energy systems. The growing interdependence of solar energy harnessed. The synergy between photovoltaic systems and energy storage not only enhances the reliability of solar power but also contributes to energy security and grid stability.
