

# How many hours can the solar outdoor power cabinet for camping be used

## Overview

---

Consider the Duration: Determine how long each device will be in use during a typical day of camping. Multiply the device's power consumption by the number of hours it will be running to calculate the daily energy consumption. Click "Add Appliance" to add more rows. Use this total to size. For instance, a 100Ah battery can provide 1 amp of power for 100 hours, or 10 amps for 10 hours. Think of it as how quickly you can fill up that battery "bucket. For overnight trips, 100-200Wh suffices, while week-long excursions require 1000+Wh with LiFePO4. An off-grid solar system's size depends on factors such as your daily energy consumption, local sunlight availability, chosen equipment, the appliances that you're trying to run, and system configuration.
