Overview

If you're looking to increase your solar capacity, connecting multiple solar panels together is a great option. But should you wire them in series, parallel, or a combination of both?

This guide explains the differences, when to use each method, and how to wire. How to connect multiple solar panels together in series: Connect the positive (+) cable of one panel to the negative (-) one of the next panel. The female MC4 connector marks a positive cable and the male MC4 is the negative. Continue with the rest until all panels are connected. All three methods have different impacts on the overall performance of solar modules. You can do that one of two ways (or a hybrid of both).
