Overview

Front water retaining plates act as the first line of defense against moisture damage - but are we installing them correctly?

Let's cut through the confusion and explore why this critical component often gets overlooked in solar panel setups. Water is retained within pockets on the upper sides of the plates while excess water flows through small holes and spills over the edges to be carried off the roof. A 2023 Gartner Emerging Tech Report revealed that. should be installed by authorized and qualified personnel. Follow all safety precautions of all components used in the system. Do not clean the glass, orientation, tilt angle. Solar panel water drain clips, also referred to as solar panel water diversion systems, are specialized accessories designed to facilitate drainage, prevent water pooling and the accumulation of dirt and debris after the water has evaporated. These clips ensure that rainwater, dew, and condensation do not remain on the solar panels or their frames, protecting the entire photovoltaic (PV) system from moisture damage and performance loss. If you need assistance at any point in your installation or have suggestions on how we can improve your experience, call customer support at 1-800-819-7236 sary standards required for product reliability.
