## Overview

**Wet the Panels:** Use a hose to spray the panels gently with water to loosen dirt and dust. Avoid using abrasive materials that could scratch the surface. This article will guide you through the process of removing dust from solar panels, why it matters, and who should be concerned about it. Dust and dirt can block sunlight from reaching the solar cells, leading to decreased energy production. Studies have shown that even a thin layer of dust can. This is accomplished by locating and manually switching off the PV DC isolator switch, which creates a visible, physical disconnect between the panels and the rest of the electrical system. This switch is typically found near the solar panels on the roof or where the DC wiring enters the building. Dust, dirt, pollen, bird droppings, and other debris can reduce energy output by 15–25%, according to the National Renewable Energy Laboratory.
