

How to solve the problem of parallel connection of photovoltaic panels

Overview

How to connect solar panels together in parallel: Join the positive (+) cables of all the panels into a single one, then do the same with all the negative (-) cables. For this, you will need branch connectors or a combiner box. This setup is common in 12V or 24V systems where you want to safely charge batteries or run low-voltage inverters. Whether you're designing a residential rooftop system or a large-scale solar farm, understanding series and parallel configurations ensures optimal performance.
