

# Ireland energy storage policy updates

## Overview

---

Irish grid operator EirGrid set the proposed minimum procurement for long duration energy storage procurement at 201 MW, well below its initial 2030 goal of 500 MW of storage capacity. Energy Storage Ireland called for more ambition and a longer contract length to reflect. Electricity storage, which entails capturing electricity produced at one time for future use, will be a key element in the successful operation of our electricity network and will accelerate our use of renewable electricity, providing cheaper, greener electricity to the consumer. Grid scale. This is the first national policy for energy storage in Ireland and as called out by Eamon Ryan, Minister for the Environment, Climate and Communications - “it is vital that Ireland exploits the full potential of electricity storage, and the publication of this policy framework is an important step. The Electricity Storage Policy Framework 2024, prepared by the Department of the Environment, Climate and Communications (DECC), provides a roadmap for integrating electricity storage systems (ESS) into Ireland's energy future. There are 10 key policy actions in the framework outlining the.
