This report presents a comprehensive analysis of the microgrid market across the United States, examining how different regulatory frameworks either facilitate or hinder microgrid development, the incentive programs available to offset implementation costs, emerging commercial. Authorized by Section 40101(d) of the Bipartisan Infrastructure Law (BIL), the Grid Resilience State and Tribal Formula Grants program is designed to strengthen and modernize America's power grid against wildfires, extreme weather, and other natural disasters that are exacerbated by the climate. NLR has been involved in the modeling, development, testing, and deployment of microgrids since 2001. A microgrid is a group of interconnected loads and distributed energy resources that acts as a single controllable entity with respect to the grid.
