## Overview

---

It builds on experience and lessons from the U. Department of Energy's (DOE) National Renewable Energy Laboratory (NREL) in supporting numerous DoD projects, including the microgrid at Marine Corps Air Station Miramar. 2 The report is structured following NREL's microgrid. But one universally required function that cuts across all the nuances of what can make a microgrid a microgrid is the ability to “island” from the grid while continuing to serve onsite electrical loads. Funding provided by the DOE's Communities LEAP (Local Energy Action Program) Pilot. The views expressed in the article do not necessarily. Sandia National Laboratories is a multimission laboratory managed and operated by National Technology & Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International Inc. Questions about operating modes, and protection coordination and whether exist-ing distributed energy resources (DER) requirements adequately. In the past decade, the number of microgrids deployed by electric utilities, end-use customers, and third parties has been increasing significantly both in the US and worldwide.
