

New Energy Solar Photovoltaic Power Plant

Overview

A solar photovoltaic (PV) power plant is an innovative energy solution that converts sunlight into electricity using the photovoltaic effect. This process occurs when photons from sunlight strike a material, typically silicon, and displace electrons, generating a direct current (DC). In June 2024, China connected the 3.5 GW Midong solar project near Ürümqi in Xinjiang to the grid, making it, at that moment, the world's largest single operational PV plant. Although some media and. In early 2025, Trina Solar set a new world record for solar conversion efficiency in n-type fully passivated heterojunction (HJT) solar modules, reaching 25. The acronym. According to the International Energy Agency (IEA), global solar photovoltaic (PV) capacity surged from 40 gigawatts (GW) in 2010 to over 710 GW by 2020.
