

New delhi increased renewable energy penetration

Overview

The data indicates that renewable energy generation fell to around 1,288 million units in 2024-25 from nearly 1,518 million units in 2023-24. During the same period, the total electricity consumption in the city increased significantly, driven by both higher domestic and commercial demand. Stay updated on Sustainability with sharp, essential insights that matter. Key initiatives include accelerating rooftop solar installations under the Surya Ghar scheme and upgrading transmission and distribution networks with a ₹17,000-crore investment. The city is also exploring innovative financing models. Delhi must use the ₹33.48 billion (US\$407 million) allotted to the energy sector in its budget for 2023-24 to aggressively pursue solar power targets, promote sustainable practices in various sectors and participate more in green electricity markets. BRPL covers an area of 691 sq km and serves over 30 lakh customers in 22 divisions across South and West Delhi. 9 GW of net capacity added—most of it from renewable sources. Fresh data from the Central Electricity Authority reveals that solar, wind, hydro, and nuclear power drove capacity growth, while no new coal capacity was added. New Delhi: The renewable energy generation in Delhi declined during the last financial year even as the overall electricity demand continued to rise, highlighting the growing challenge of meeting the city's expanding power needs through local clean energy sources, official data shows. The data shows that cities like Delhi, which are more prone to heatwaves, have to be prepared for a daily peak electricity load demand of around 8 gigawatts (GW) in the summer of 2024.

New delhi increased renewable energy penetration

New Delhi Sees Surge in Green Energy Projects This Fiscal Year

This surge in renewables marks a pivotal moment in India's journey toward meeting its 2030 non-fossil energy goals, even as coal remains the country's dominant baseload.

Power demand up, but green energy generation dips in 2024-25

New Delhi: The renewable energy generation in Delhi declined during the last financial year even as the overall electricity demand continued to rise, highlighting the growing challenge of ...

How Delhi can meet its energy needs amid a sizzling summer

Given India's net zero emissions commitment by 2070, Delhi, which is both victim and creator of urban heat islands and heat effects from human-induced climate change, is forced to think ...

Energy transition in megacities towards 100% renewable energy: A ...

This research is a first of its kind to explore the technical feasibility and economic viability of 100% renewable energy systems including power, heat, transport and desalination sectors for a ...
