

# New energy battery cabinet energy density

## Overview

---

The newest generation product boasts an energy density exceeding 440 Wh/l, a roundtrip efficiency of 96 percent, and a lifespan of nearly 16,000 charge-discharge cycles. As battery technology advances, energy density is increasing, allowing for longer-lasting and more powerful devices. Nickel Manganese Cobalt (NMC) variants deliver the highest energy densities at the cell level, reaching 250-300 Wh/kg in. Shanghai-based Envision Energy unveiled its newest large-scale energy storage system (ESS), which has an energy density of 541 kWh/m<sup>3</sup>, making it currently the highest in the industry. The launch comes after its fellow Chinese battery manufacturer CATL introduced its 6.25 MWh storage system in April. Factory assembled with LFP (Lithium-Iron-Phosphate) battery modules and Vertiv's internally-powered battery management system, Vertiv EnergyCore cabinets are available globally and are qualified for use with most current and legacy three-phase Vertiv™ uninterruptible power supply (UPS) systems. A BESS cabinet (Battery Energy Storage System cabinet) is no longer just a “battery box.” In modern commercial and industrial (C&I) projects, it is a full energy asset —designed to reduce electricity costs, protect critical loads, increase PV self-consumption, support microgrids, and even earn. On October 10-12, the 11th SNEC ES+ (2025) International Energy Storage and Battery Technology and Equipment Exhibition (referred to as "SNEC ES+ 2025") was successfully held in Shanghai. EVE Energy showcased its comprehensive portfolio of full-scenario energy storage solutions, systematically.
