

New sodium-based solar container battery system

Overview

Peak Energy shipped out its first sodium-ion battery energy storage system, and the Burlingame, California-based company says it's achieved a first in three ways: the US's first grid-scale sodium-ion battery storage system; the largest sodium-ion phosphate pyrophosphate (NFPP). Peak Energy shipped out its first sodium-ion battery energy storage system, and the Burlingame, California-based company says it's achieved a first in three ways: the US's first grid-scale sodium-ion battery storage system; the largest sodium-ion phosphate pyrophosphate (NFPP). Following a successful test in the UK, a new, large scale iron-sodium energy storage system will be manufactured in the US, helping to shepherd more wind and solar energy into the nation's power generation profile (courtesy of Inlyte via PR Newswire). But unlike lithium, a somewhat rare element that is currently mined in only a handful of countries, sodium is cheap and found everywhere. SMBs, or sodium metal batteries, have long been considered a promising. A new sodium breakthrough could supercharge solid-state batteries: cleaner, cheaper, and ready for the future. Rather than being based on Lithium.
