

Pakistan solar energy storage subsidies

Overview

Direct subsidies on solar equipment. Net metering policies that let you sell extra electricity back to the grid. Tax exemptions on imported panels and inverters. Pakistan has witnessed one of the most rapid and unanticipated transitions to clean energy, driven largely by homes and businesses installing rooftop solar panels. In just a few years, the country's electric grid transformed from negligible solar power to an expected 20% of all its electricity. To make solar energy more accessible and affordable for the masses, the Government of Pakistan introduced updated solar panel subsidies in 2025. To encourage this transition, the government of Pakistan, in collaboration with various provincial authorities and banks, has launched. Net metering allows users to sell surplus electricity back to the grid (though tariff cuts from PKR 27/kWh to PKR 10/kWh in 2025 are under debate).
