

Parallel connection of lithium battery packs of the same specifications

51.2V 300AH

Overview

Yes, you can link battery packs safely. Ensure each pack outputs at least 21V (e. 2V each) before connecting them. Summary: Connecting lithium battery packs in parallel is a common practice to increase capacity and redundancy in renewable energy systems. This guide explains the process, safety considerations, and real-world applications – perfect for solar installers, EV enthusiasts, and industrial energy. Lithium battery banks using batteries with built-in Battery Management Systems (BMS) are created by connecting two or more batteries together to support a single application. Always ensure that your batteries have the same voltage and chemistry before you start.
