

Photovoltaic panels generate electricity directly to drive power

Overview

When the sun is shining, PV systems can generate electricity to directly power devices such as water pumps or supply electric power grids. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of. Solar PV panels are often described as “turning sunlight into electricity,” but for many homeowners and first-time solar users, that explanation feels too simple. Encyclopaedia Britannica's editors oversee subject areas in which they have extensive knowledge, whether from years of experience gained by working on that content or via study for an advanced degree.
