

# Photovoltaic panels with graphics card mining machine

## Overview

---

Using solar power for cryptocurrency mining is possible. Cryptocurrency mining is a complex process that involves validating and securing transactions on the blockchain while creating new monetary units. One Bitcoin requires 266,000 kilowatt-hours - the amount one American household consumes in 24 years. Where to get the energy and what about solar?

In this article, we'll. Integrating crypto mining with solar panels offers a sustainable and cost-effective alternative, combining profitability with environmental responsibility. This setup can be off-grid or connected to the local power system.
