

Photovoltaic technology and solar thermal power generation

Overview

Solar PV systems and solar thermal pump systems are two common methods of harnessing solar energy, each with its own set of advantages and limitations. The integration of these two technologies results in the formation of a solar photovoltaic/thermal (PV/T) system. The growth of global energy demand and the aggravation of environmental pollution have prompted the rapid development of renewable energy, in which the solar photovoltaic/thermal (PV/T) heat pump system, as a technology integrating photovoltaic power generation and thermal energy conversion, has. Solar photovoltaic (PV) and solar thermal are both leading sustainable solutions.
