

Residential community uses Yangtze River Economic Belt power storage cabinet rack type

Overview

This study uses the SBM-Undesirable model to measure the energy-environment efficiency of the Yangtze River Delta Urban Agglomeration from 2010 to 2020, adopts a modified gravity model and social network analysis to reveal the structural characteristics of its spatial correlation. This study uses the SBM-Undesirable model to measure the energy-environment efficiency of the Yangtze River Delta Urban Agglomeration from 2010 to 2020, adopts a modified gravity model and social network analysis to reveal the structural characteristics of its spatial correlation. The Yangtze River Economic Belt is a critical strategic region for China's economic development. Accurately assessing the energy transition level of the Yangtze River Economic Belt and identifying key barriers in the region are essential for achieving China's carbon neutrality goals. This study utilizes the Google Earth Engine (GEE) platform to integrate four land cover and impervious surface datasets, constructing built-up. The People's Republic of China (PRC), in its Fourteenth Five-Year Plan, 2021–2025, promotes rural vitalization and ecological civilization as a green development model and identifies development of the Yangtze River Economic Belt (YREB) as a high priority.

Residential community uses Yangtze River Economic Belt power sto

Impact of environmental investment and resource endowment on ...

Based on provincial panel data from 2006 to 2017 in the Yangtze River Economic Belt (YREB), this article set up two econometric models and applied the panel regression analysis ...

Spatial correlation network structure of energy-environment ...

The Yangtze River Delta Urban Agglomeration is located at the important intersection of the "One Belt and One Road" and the Yangtze River Economic Belt, covering 26 prefecture-level

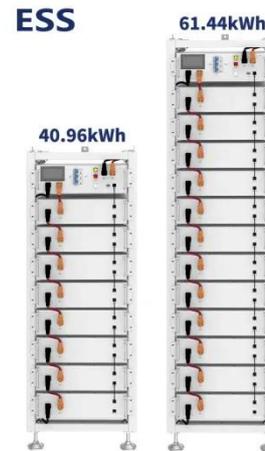

Evaluation of urban energy transition and identification of barrier

Through the integrated index model and barrier degree model, a quantitative analysis is conducted to explore the dynamics and potential mechanisms of energy transition in the Yangtze ...

Yangtze River Economic Belt Jiangxi Ecological Civilization and

This appendix documents work completed on project benefits for the Yangtze River Economic Belt Jiangxi Ecological Civilization and Circular Economy Project. The work was undertaken to provide a ...

The impact of industrial structural transformation in the Yangtze River

Explores the spatiotemporal evolution of trade-offs and synergies between urbanization and carbon balance in the Yangtze River Economic Belt.

Evaluation of Resources and Environment Carrying Capacity Based ...

Taking the Yangtze River Economic Belt (YREB) as the study area, this study establishes a framework for analyzing RECC based on the resource and environmental support ...

Sustainable Urbanization in the Yangtze River Basin

Through

Abstract The Yangtze River Economic Belt (YREB), spanning nine provinces and cities in eastern, central, and western China, is a key region for China's urbanization.

Whether the development strategy of the Yangtze River Economic ...

The synergistic governance mechanism for pollution control and carbon reduction in the development strategy of the Yangtze River Economic Belt is to increase investment in pollution ...

Harmonizing new-type urbanization and eco-efficiency

Utilizing the entropy method and the Super-SBM model, we assess the NTU index and EE across multiple cities, subsequently analyzing their interactions through the coupling coordination ...
