

Rooftop solar energy can generate electricity

Overview

According to our calculations, the average-sized roof can produce about 21,840 kilowatt-hours (kWh) of solar electricity annually—about double the average U. How much solar power can you generate based on your roof size?

In a perfect world, the average roof in the U. But also, the world isn't perfect. Realistically, your roof's solar. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. 4 million American homes now powered by solar panels. It involves a complex interplay of material science, engineering, and environmental science.
